Divide
Systematic
Prime number

A factor is a number which divides exactly into another one.

Here is a factor bug for 12

Therefore, 12 has 6 factors.
They are: 1, 2, 3, 4, 6 and 12

Therefore, 12 has 3 factor pairs.

They are:

$$1 \times 12$$

$$2 \times 6$$

$$3 \times 4$$
