

# Subtraction

## Key Words

place value

tens

ones

partition

subtract -

take away -

minus -

exchange

$$22 - 7 = 15$$

We can **partition** 7 into 5 and 2 and use this to bridge the 10.

$$78 \text{ minus } 34 = 44$$

$$8 \text{ ones} - 4 \text{ ones} = 4 \text{ ones}$$

$$7 \text{ tens} - 3 \text{ tens} = 4 \text{ tens}$$

We have 4 tens and 4 ones

$$42 - 15 = 27$$

We can't subtract the ones. So we need to partition differently.

Now we can subtract the ones and then subtract the tens.

$$42 - 15 = 27$$
